

CHRISTMAS ORNAMENTS
EYES FOR THE JOB- EPISODE 312.1
'LASER BEAMS AND SUPER HEROES'

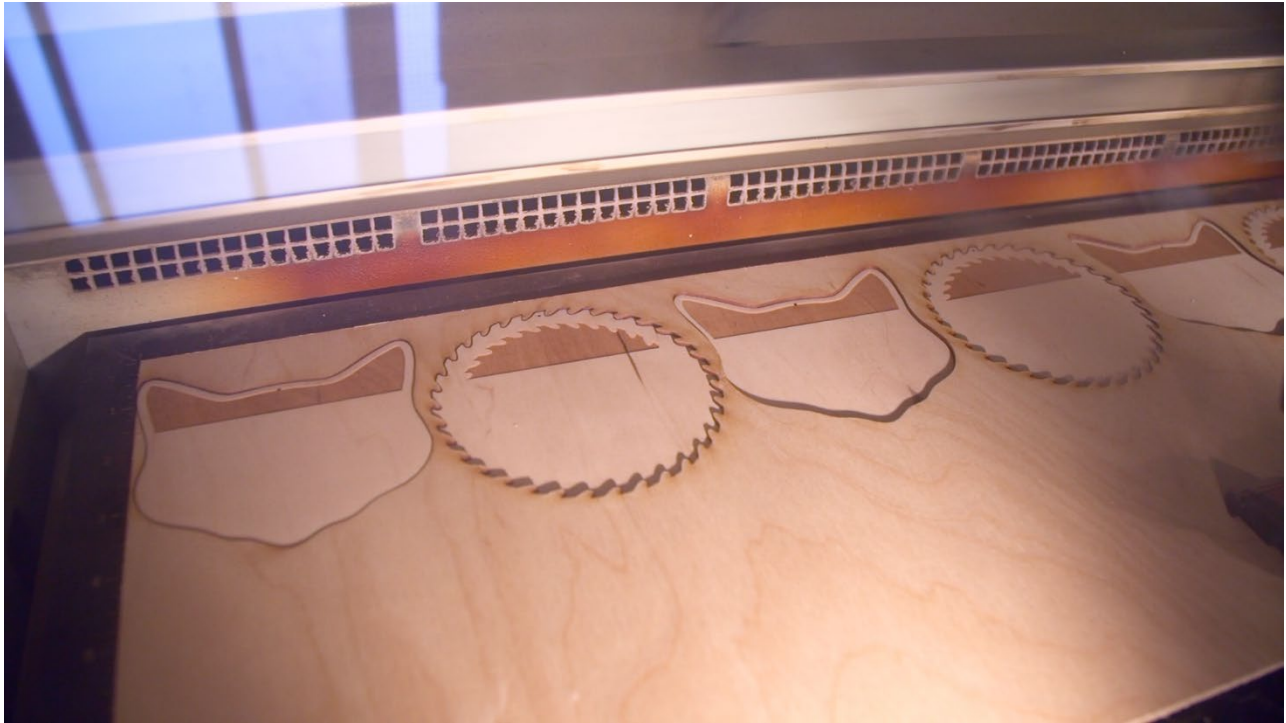

MATERIALS NEEDED

A Sheet of plywood
Water-based Varathane
String

TOOLS NEEDED

Laser engraver
Laptop
Track saw or table saw

STEP BY STEP BUILD PLAN

1. Design ornaments on the computer, in a program specifically used by the laser engraver.
2. Use a table saw, or track saw, to cut out a sheet of plywood to fit into the Laser Engraver.
3. Paint the plywood the base color you want the ornaments to be.
4. Put the sheet of wood into the engraver, hooked up to the computer.
5. The computer will tell the laser engraver what to create.
6. When the engraving is done pop the ornaments out of the plywood.
7. Drill tiny holes into the ornaments, for string to go through.
8. Spray some water-based varathane on them, to help protect them with a matte finish.
9. Put string through the ornaments and tie it up.
